

## ISA Analog Input Board

# ISO-AD32

32-channel 12-bit 200KS/s isolated analog input board

### Functional Description

The ISO-AD32H/L (H for high gain; L for low gain) is a bus-type isolated 12-bit A/D board for PC/AT compatible computers. The isolation inputs can operate up to 500Vrms of common-mode voltage. The ISO-AD32H/L features a 200KHz 12-bit analog-to-digital converter, on board 1 K bytes FIFO buffer, 32 single-ended or 16 differential analog input channels. The analog input allows auto-channel /gain scan. This board supports gap-free A/D conversion at 200KHz sampling rates for single channel or 100KHz sampling rates for channel scanning.

The "Hands-Off" design permits all board parameters (channel selection, gain, input type, operating mode) to be performed in software. Once installed, user will never have to worry again.

The innovative design improve several drawbacks of the conventional isolated A/D card. Such as:

1. The speed is faster; up to 200KHz
2. The sampling rate can be programmable
3. On board FIFOs buffer support gap-free A/D conversion and work well under DOS and Windows environment
4. High channel count input can be implemented in half size board.
